14-Jun-17 08:29:00 Neutrophil Associated Antibodies:  
 INTERPRETIVE INFORMATION: Neutrophil Associated Antibodies

Neutrophil-associated antibodies may cause neutropenia in various autoimmune disorders including Felty syndrome, SLE and drug-induced neutropenia. Febrile transfusion reactions and isoimmune neonatal neutropenia may also be caused by antibodies to neutrophil-specific antigens or HLA antigens.

A positive result is not definitive for specific anti-neutrophil antibodies. Anti-HLA antibodies and immune complexes may also cause a positive result. The results of this test should be correlated to clinical history and other data.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS
