14-Dec-17 10:59:00 Fetal Hgb - Percent Fetal RBCs:
 INTERPRETIVE INFORMATION: Fetal Hemoglobin, Determination

The fetal RBC percentage is directly measured by flow cytometry and gives the percentage of fetal RBCs in the maternal circulation resulting from recent fetal-maternal hemorrhage. Post-partum, some fetal cells are expected (0.04% plus or minus 0.024%, mean plus or minus SD). For accurate calculation of RhIG dosage that includes maternal height and weight, please refer to the CAP RhIG calculator (<http://capathology.com/RHIG>) or to the most recent AABB Technical Manual.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS

* Abnormal, # = Corrected, C = Critical, f = Footnote, H = High, L = Low, t = Interpretive Text, @ = Reference Lab
