

### MEDICARE COVERAGE OF LABORATORY TESTING

Please remember when ordering laboratory tests that are billed to Medicare/Medicaid or other federally funded programs, the following requirements apply:

1. Only tests that are medically necessary for the diagnosis or treatment of the patient should be ordered. Medicare does not pay for screening tests except for certain specifically approved procedures and may not pay for non-FDA approved tests or those tests considered experimental.
2. If there is reason to believe that Medicare will not pay for a test, the patient should be informed. The patient should then sign an Advance Beneficiary Notice (ABN) to indicate that he or she is responsible for the cost of the test if Medicare denies payment.
3. The ordering physician must provide an ICD-10 diagnosis code or narrative description, if required by the fiscal intermediary or carrier.
4. Organ- or disease-related panels should be billed only when all components of the panel are medically necessary.
5. Both ARUP- and client-customized panels should be billed to Medicare only when every component of the customized panel is medically necessary.
6. Medicare National Limitation Amounts for CPT codes are available through the Centers for Medicare & Medicaid Services (CMS) or its intermediaries. Medicaid reimbursement will be equal to or less than the amount of Medicare reimbursement.

The CPT Code(s) for test(s) profiled in this bulletin are for informational purposes only. The codes reflect our interpretation of CPT coding requirements, based upon AMA guidelines published annually. CPT codes are provided only as guidance to assist you in billing. ARUP strongly recommends that clients reconfirm CPT code information with their local intermediary or carrier. CPT coding is the sole responsibility of the billing party.

**0083001**

**Adenosine Deaminase, RBC**

**ADA**

**Interpretive Data:** Adenosine Deaminase (ADA) deficiency is an autosomal recessive disorder of purine metabolism primarily affecting lymphocyte development, viability, and function. Affected individuals have less than 1 percent of normal ADA catalytic activity in red cell hemolysates. ADA deficiency is the cause of 20-30 percent of SCID cases. If the patient has been recently transfused, ADA deficiency may be masked; interpret results with caution. Heterozygotes cannot be identified by this test. If clinical suspicion remains, consider testing to determine the ADA genotype: Severe Combined Immunodeficiency (SCID) Panel, Sequencing and Deletion/Duplication, 19 Genes (ARUP test code 2010219).

**2003204**

**Alpha-Galactosidase, Serum**

**0080001**

**Angiotensin Converting Enzyme, Serum**

**ACE**

**Specimen Required:** Unacceptable Conditions: EDTA, heparin plasma, or CSF (refer to Angiotensin Converting Enzyme, CSF test code 0098974)  
 Hemolyzed specimens.

**0098771**

**Angiotensin II, Plasma**

**ANGIO II**

**Performed:** Varies  
**Reported:** 4-18 days

**Specimen Required:** Storage/Transport Temperature: Frozen.  
Stability (collection to initiation of testing): Ambient: Unacceptable; Refrigerated: 24 hours; Frozen: 1 month

---

**0060201      Antimicrobial Susceptibility - MIC, Individual      MA MIC**

**Performed:**      Sun-Sat  
**Reported:**      2-4 days

**Interpretive Data:** **Susceptibility testing is performed by broth microdilution using custom-made MIC panels and is interpreted according to CLSI guidelines.**

**Note:** The MIC is defined as the lowest concentration of an antibiotic which will inhibit the in vitro growth of an infectious organism. Results are reported in micrograms per mL. The interpretation of in vitro data is based on achievable serum concentrations, which may vary depending on dose, route of administration, degree of protein binding, site of infection, age and weight of the patient, state of health of the patient, and other factors.

Reporting of MICs can provide the physician with precise information regarding the infectious organism's degree of susceptibility. When this information is coupled with the physician's knowledge of the site and severity of the infection, as well as the pharmacology of antibiotics, a rational choice of the most appropriate antibiotic can be made to suit the individual patient. With the quantitative MIC: (1) susceptibility can be determined for dosages and routes of administration other than those usually prescribed and (2) susceptibility can more accurately be related to the achievable antibiotic concentration in urine, bile, CSF, and other body fluids which may vary widely from the achievable concentration in serum.

This test will bill per antibiotic tested. Susceptibility panels are available for certain organisms. Refer to Antimicrobial Susceptibility by organism type. For organisms where panels are not available, specific agent(s) to be tested must be indicated.

For staphylococcal species, oxacillin resistance testing is performed in order to interpret the results for  $\beta$ -lactam agents.

Daptomycin MIC is available for testing MRSA or VRE.

An additional processing fee will be billed for all organisms not submitted in pure culture, as indicated in the specimen requirements.

If species identification is not provided, identification will be performed at ARUP. Additional charges apply.

**2013327      Aquaporin-4 Receptor Antibody by ELISA with Reflex to Aquaporin-4 Receptor Antibody, IgG by IFA      AQP4 R**

**HOT LINE NOTE:** There is a price change associated with this test. Please contact ARUP Client Services at (800) 522-2787 for additional information.

**New Test**     **2013601**  
Available August 15, 2016

**Autoimmune Encephalitis Reflexive Panel**

**AUTOENCEPH**

**Methodology:** Semi-Quantitative Indirect Fluorescent Antibody/Semi-Quantitative Enzyme-Linked Immunosorbent Assay/Quantitative Radioimmunoassay

**Performed:** Tue

**Reported:** 1-8 days

**Specimen Required:** Collect: Serum Separator Tube (SST).

Specimen Preparation: Separate from cells ASAP or within 2 hours of collection. Transfer three 3 mL aliquots of serum to individual ARUP Standard Transport Tubes. (Min: 0.75 mL/aliquot)

Storage/Transport Temperature: Frozen.

Remarks: N/A

Unacceptable Conditions: Amniotic fluid, ocular fluid, peritoneal fluid, synovial fluid, CSF, or plasma. Contaminated, hemolyzed, icteric, or lipemic specimens.

Stability (collection to initiation of testing): After separation from cells: Ambient: 24 hours; Refrigerated: 1 week; Frozen: 1 month (avoid repeated freeze/thaw cycles)

**Reference Interval:**

Test Number	Component	Reference Range	
2004221	N-methyl-D-Aspartate Receptor Antibody, IgG with Reflex to Titer	Less than 1:10	
2001771	Glutamic Acid Decarboxylase Antibody	0.0-5.0 IU/mL	
2004890	Voltage-Gated Potassium Channel (VGKC) Antibody	Negative	31 pmol/L or less
		Indeterminate	32-87 pmol/L
		Positive	88 pmol/L or greater
2003036	Aquaporin-4 Receptor Antibody	Negative:	4 U/mL or less
		Indeterminate:	5 U/mL
		Positive:	6 U/mL or greater
2013320	Aquaporin-4 Receptor Antibody, IgG by IFA with Reflex to Titer, Serum	Less than 1:10	
2009456	Leucine-Rich, Glioma-Inactivated Protein 1 Antibody, IgG with Reflex to Titer	Less than 1:10	
2009452	Contactin-Associated Protein-2 Antibody, IgG with Reflex to Titer	Less than 1:10	

**Interpretive Data:** By report

**Note: AQP4:** If AQP4 antibody IgG by ELISA is positive, then AQP4 antibody IgG by IFA will be added. If AQP4 antibody IgG by IFA is positive, then an AQP4 antibody IgG titer will be added. Additional charges apply.

**VGKC:** If VGKC is Indeterminate or Positive, LGI1 Antibody IgG and CASPR2 Antibody IgG will be added. If LGI1 antibody IgG is positive, then LGI1 antibody IgG titer will be added. If CASPR2 antibody IgG is positive, then CASPR2 antibody IgG titer will be added. Additional charges apply.

**NMDA:** If NMDA antibody IgG is positive, then an NMDA antibody IgG titer is reported. Additional charges apply.

**CPT Code(s):** 83519; if reflexed add 86255 x2, if further reflexed add 86256 per titer; 83516; 86255, if reflexed add 86256; 83516, if reflexed add 86255, if further reflexed add 86256

New York DOH approval pending. Call for status update.

**HOT LINE NOTE:** Refer to the Test Mix Addendum for interface build information.

**BATHSLT SP**

**Specimen Required:** Collect: Plain Red, Lavender (EDTA), or Pink (K<sub>2</sub>EDTA). Also acceptable: Light Blue (Sodium Citrate).

**0092303**

**Calprotectin, Fecal**

**CALPRO**

**Performed:** Sun-Sat  
**Reported:** 1-3 days

**Reference Interval: Effective August 15, 2016**

50 µg/g or less: Normal  
 51-120 µg/g: Borderline elevated, test should be re-evaluated in 4-6 weeks.  
 121 µg/g or greater: **Abnormal**

**2002918**

**Carbohydrate Deficient Transferrin for Congenital Disorders of Glycosylation (CDG)**

**CARBOH-CDG**

**New Test**

**2013433**

**Clozapine and Metabolites, Serum or Plasma, Quantitative**

**CLOZAP SP**

Available July 18, 2016

**Methodology:** Quantitative Liquid Chromatography-Tandem Mass Spectrometry  
**Performed:** Sun-Sat  
**Reported:** 1-3 days

**Specimen Required:** Patient Prep: Timing of specimen collection: Pre-dose (trough) draw - At steady state concentration.  
Collect: Plain Red. Also acceptable: Lavender (K<sub>2</sub> or K<sub>3</sub>EDTA) or Pink (K<sub>2</sub>EDTA).  
Specimen Preparation: Separate from cells ASAP or within 2 hours of collection. Transfer 1 mL serum or plasma to an ARUP Standard Transport Tube. (Min: 0.5 mL)  
Storage/Transport Temperature: Refrigerated.  
Unacceptable Conditions: Whole blood. Gel separator tubes, light blue (citrate), or yellow (SPS or ACD solution).  
Stability (collection to initiation of testing): After separation from cells: Ambient: 5 weeks; Refrigerated: 2 months; Frozen: 2 months

**Reference Interval:**

Total Clozapine and Metabolites	Therapeutic: Not well established. Toxic: Greater than or equal to 1500 ng/mL
---------------------------------	--

**Interpretive Data:** Therapeutic ranges are not well established. Clozapine is metabolized to norclozapine and clozapine-N-oxide. Clozapine concentrations between 100 and 700 ng/mL may correlate more with clinical response; however, non-responsiveness may also occur within this range. For refractory schizophrenia, clozapine concentrations greater than 350 ng/mL are suggested to achieve a therapeutic response.

**Toxicity:** Toxic ranges are not well established. Serum/plasma concentrations greater than or equal to 1500 ng/mL (clozapine, norclozapine and clozapine-N-oxide combined) may cause drug-induced agranulocytosis, Stevens-Johnson syndrome, seizures, hypotension, cardiovascular abnormalities, drowsiness, and death.

Therapeutic and toxic ranges are not well established in children.

See Compliance Statement B: [www.aruplab.com/CS](http://www.aruplab.com/CS)

**CPT Code(s):** 80159

New York DOH Approved.

**HOT LINE NOTE:** Refer to the Test Mix Addendum for interface build information.

**New Test**     [2013258](#)  
Available July 18, 2016

**Consultation, Hematopathology**

**HP CONSULT**

**Methodology:**     Microscopy  
**Performed:**        Mon-Fri  
**Reported:**          Varies

**Specimen Required:** Collect: Tissue.

Specimen Preparation: Formalin fix (10 percent neutral buffered formalin is preferred) and paraffin embed specimen. Protect paraffin block and/or slides from excessive heat. Transport all case material to include stained slides, paraffin blocks and surgical pathology report.

Storage/Transport Temperature: Room temperature. Also acceptable: Refrigerated. Ship in cooled container during summer months.

Remarks: Submit electronic request. If you do not have electronic ordering capability, use an ARUP Anatomic Pathology Form (#32960) with an ARUP client number. For additional technical details, contact ARUP Client Services at (800) 522-2787.

Unacceptable Conditions: Specimens submitted with non-representative tissue type. Depleted specimens.

Stability (collection to initiation of testing): Ambient: Indefinitely; Refrigerated: Indefinitely; Frozen: Unacceptable

**Interpretive Data:** Refer to report.

**Note:** Appropriate stains and other ancillary testing may be performed and charged separately. Tests requested by the referring physician (eg., immunostains, molecular studies, etc.) may not be performed if they are deemed to be unnecessary by the reviewing ARUP pathologist. For all pathology consultations, ancillary testing is ordered at the discretion of the ARUP pathologist.

**CPT Code(s):**     88321 or 88323 or 88325, if ancillary testing is performed, additional CPT codes and charges may apply

New York DOH approval pending. Call for status update.

**CRT**

**Note:** Assay interference (negative) may be observed when high concentrations of N-acetylcysteine (NAC) are present. Negative interference has also been reported with NAPQI (an acetaminophen metabolite) but only with concentrations at or above those expected during acetaminophen overdose.

**0051232**

**Cytochrome P450 2D6 (CYP2D6) 14 Variants and Gene Duplication**

**CYP 2D6**

**Specimen Required:** Unacceptable Conditions: Plasma or serum. Heparinized specimens.  
Stability (collection to initiation of testing): Ambient: 72 hours; Refrigerated: 2 weeks; Frozen: 1 month

**Interpretive Data:**

**Background Information for Cytochrome P450 2D6 (CYP2D6) 14 Variants and Gene Duplication:**

**Characteristics:** Impaired drug metabolism causing adverse drug reactions or lack of drug response. Drugs metabolized by CYP2D6 include antiestrogens (tamoxifen), alpha-blockers, analgesics, anticonvulsives, antidepressants, antidiabetics, antihypertensives, antipsychotics, antitussives, beta blockers, cardioactives, norepinephrine reuptake inhibitors, and stimulants. Additionally, many drugs inhibit CYP2D6 activity, and may affect drug response.

**Inheritance:** Autosomal co-dominant.

**Cause:** CYP2D6 gene variants.

**Variants Tested:** (Variants are numbered according to M33388 sequence.)

**Functional:** \*2 (2850C>T), \*2A (-1584C>G; 2850C>T).

**Decreased function:** \*9 (2613-5delAGA), \*10 (100C>T), \*17 (1023C>T), \*29 (1659G>A) \*41 (2988G>A).

**Non-functional:** \*3 (2549delA), \*4 (1846G>A), \*5 (gene deletion), \*6 (1707delT), \*7 (2935A>C), \*8 (1758G>T), \*12 (124G>A), \*14 (1758G>A).

**Increased function:** Duplicated functional alleles.

**Negative:** No mutations detected is predictive of \*1 functional alleles.

**Incidence of Poor Metabolizer Phenotype:** Caucasians and Hispanics - 10 percent; African Americans - 2 percent; Asians - 1 percent..

**Clinical Sensitivity:** Drug dependent.

**Methodology:** Multiplex polymerase chain reaction and detection primer extension.

**Analytical Sensitivity and Specificity:** Greater than 99 percent.

**Limitations:** Only the targeted CYP2D6 variants will be detected by this panel. Diagnostic errors can occur due to rare sequence variations. Risk of therapeutic failure or adverse reactions with CYP2D6 substrates may be affected by genetic and non-genetic factors that are not detected by this test. This result does not replace the need for therapeutic drug or clinical monitoring.

See Compliance Statement C: [www.aruplab.com/CS](http://www.aruplab.com/CS)

**2010921 Eosinophil Granule Major Basic Protein, Tissue EGMBP TIS**

**Specimen Required:** Specimen Preparation: Transport tissue in Michel's media (ARUP supply #45462) available online through eSupply using ARUP Connect or call ARUP Client Services at (800) 522-2787. Also acceptable: Zeus tissue fixative.  
Unacceptable Conditions:  
Stability (collection to initiation of testing): Ambient: 10 days; Refrigerated: 10 days; Frozen: Unacceptable

**HOT LINE NOTE:** Remove information found in the Unacceptable Conditions field.

**2002902 Epstein-Barr Virus (EBV) by in situ Hybridization, Paraffin EBV ISH**

**Specimen Required:** Specimen Preparation: Formalin fix (10% neutral buffered formalin) and paraffin-embed tissue. Transport tissue block or 5 unstained 5 micron slides. (Min: 4 slides) Protect paraffin block and/or slides from excessive heat.

**New Test 2013592 Epstein-Barr Virus (EBV) by In Situ Hybridization, Stain Only SO EBV ISH**  
 Available July 18, 2016

Immunohistochemistry Stain Form  
 Recommended (ARUP form #32978)

Additional Technical Information

**Methodology:** In situ Hybridization  
**Performed:** Mon-Fri  
**Reported:** 2-5 days

**Specimen Required:** Collect: Tissue or cells.  
Specimen Preparation: Formalin fix (10 percent neutral buffered formalin) and paraffin embed specimen (cells must be prepared into a cellblock). Protect paraffin block and/or slides from excessive heat. Transport tissue block or 6 unstained (3- to 5-micron thick sections), positively charged slides in a tissue transport kit (ARUP supply #47808) available online through eSupply using ARUP Connect™ or contact ARUP Client Services at (800) 522-2787. (Min: 3 slides) If sending precut slides, do not oven bake.  
Storage/Transport Temperature: Room temperature. Also acceptable: Refrigerated. Ship in cooled container during summer months.  
Remarks: **IMMUNOHISTOCHEMISTRY ORDERING AND SUBMISSION DETAILS:** Submit electronic request. If you do not have electronic ordering capability, use an ARUP Immunohistochemistry Stain Form (#32978) with an ARUP client number. For additional technical details, contact ARUP Client Services at (800) 522-2787.  
Unacceptable Conditions: Specimens submitted with non-representative tissue type. Depleted specimens.  
Stability (collection to initiation of testing): Ambient: Indefinitely; Refrigerated: Indefinitely; Frozen: Unacceptable

**Reference Interval:** Negative

**Interpretive Data:** See Compliance Statement A: [www.aruplab.com/CS](http://www.aruplab.com/CS)

**CPT Code(s):** 88365

New York DOH Approved.

**HOT LINE NOTE:** Refer to the Test Mix Addendum for interface build information.

Available August 15, 2016

**Fatty Acids Profile, Essential Serum or Plasma**

**FA PRO SP**

Patient History For Biochemical Genetics

**Methodology:** Quantitative Gas Chromatography/Mass Spectrometry/Stable Isotope Dilution  
**Performed:** Varies  
**Reported:** 4-10 days

**Specimen Required:** Patient Prep: Patient must fast overnight for 12-14 hours. Patient must not consume any alcohol for 24 hours prior to collection.  
Collect: Plasma: Green (sodium or lithium heparin) or Lavender (EDTA).  
Serum: Plain Red or Serum Separator Tube (SST).  
Specimen Preparation: Separate from cells ASAP or within 45 minutes of draw. Transfer 0.5 mL serum or plasma to an ARUP Standard Transport Tube. (Min: 0.15 mL) Freeze immediately.  
Storage/Transport Temperature: Frozen.  
Remarks: Patient age is required on the test request form. Include information regarding treatment, family history, and tentative diagnosis.  
Unacceptable Conditions: Grossly hemolyzed, icteric, lipemic, or non-fasting specimens.  
Stability (collection to initiation of testing): Ambient: 48 hours; Refrigerated: 1 week; Frozen: 3 months

**Reference Interval:** By Report

**Interpretive Data:** See Compliance Statement B: [www.aruplab.com/CS](http://www.aruplab.com/CS)

**CPT Code(s):**     82542

New York DOH approval pending. Call for status update.

**Heat Shock Protein 70, IgG by Immunoblot**

**HSP**

**Methodology:**     Qualitative Immunoblot  
**Performed:**        Sun, Tue, Thu  
**Reported:**         1-4 days

**Specimen Required:** Collect: Serum Separator Tube (SST) or Plain Red.

Specimen Preparation: Transfer 0.5 mL serum to an ARUP Standard Transport Tube. (Min: 0.1 mL)

Storage/Transport Temperature: Refrigerated.

Unacceptable Conditions: Urine or plasma. Heat inactivated and contaminated specimens.

Stability (collection to initiation of testing): Ambient: 48 hours; Refrigerated: 2 weeks; Frozen: 1 year

**Reference Interval:** Negative

**Interpretive Data:** The presence of HSP70 IgG antibodies may be useful in predicting corticosteroid responsiveness in a subset of patients with autoimmune inner ear disease (AIED) characterized by idiopathic rapidly progressive sensorineural hearing loss (SNHL). HSP70 IgG antibodies are also associated with a number of autoimmune diseases and have also been reported in apparently healthy individuals. A negative result does not rule out response to treatment or to a diagnosis of AIED.

**2011704 Smith-Lemli-Opitz Syndrome (**DHCR7**) Sequencing, Fetal DHCR7 FE**

**Specimen Required:** Collect: **Fetal Specimen:** Two T-25 flasks at 80 percent confluent culture of amniocytes. **If the client is unable to culture amniocytes, this can be arranged by contacting ARUP Client Services at (800) 522-2787.**  
**Maternal Whole Blood:** Lavender (K<sub>2</sub>EDTA), Lavender (K<sub>3</sub>EDTA), Pink (K<sub>2</sub>EDTA), or Yellow (ACD Solution A or B).  
Specimen Preparation: **Cultured Amniocytes:** Fill flask with culture media. Transport two T-25 flasks at 80 percent confluent of culture amniocytes filled with culture media.  
**Maternal Whole Blood:** Transport 3 mL whole blood (Min: 1mL)  
Storage/Transport Temperature: **Cultured Amniocytes: CRITICAL ROOM TEMPERATURE.** Must be received within 48 hours of shipment due to liability of cells.  
**Maternal Whole Blood:** Room temperature.

**New Test**     [2013436](#)  
Available July 18, 2016

**Spinal Muscular Atrophy (SMA) Copy Number Analysis**

**SMA DD**

Patient History for Spinal Muscular Atrophy (SMA) Testing

**Methodology:** Multiplex Ligation-dependent Probe Amplification  
**Performed:** Varies  
**Reported:** Within 2 weeks

**Specimen Required:** Collect: Lavender (EDTA), Pink (K<sub>2</sub>EDTA), or Yellow (ACD Solution A or B).  
Specimen Preparation: Transport 3 mL whole blood. (Min: 2 mL)  
Storage/Transport Temperature: Refrigerated.  
Stability (collection to initiation of testing): Ambient: 72 hours; Refrigerated: 1 week; Frozen: Unacceptable

**Reference Interval:** By report

**Interpretive Data:**

**Background information for Spinal Muscular Atrophy (SMA) Copy Number Analysis**

**Characteristics:** Spinal muscular atrophy (SMA) is the most common lethal genetic disease in children, and is characterized by progressive muscle weakness due to degeneration of the lower motor neurons. Onset ranges from before birth to adulthood and severity is highly variable. Individuals with SMA have no (zero) functioning copies of the *SMN1* gene that produces survival motor neuron protein; most (95 percent) have homozygous loss of *SMN1* due to deletion or gene conversion, while some (5 percent) have a sequence variant in one remaining copy of *SMN1*. The *SMN2* gene, adjacent and highly homologous to *SMN1*, produces lower levels of survival motor neuron protein compared to *SMN1*. Disease severity has been shown to be modified by *SMN2* gene copy number in some cases, but phenotype cannot be predicted with certainty. *SMN2* copy number will be reported for individuals with zero copies of *SMN1* or symptomatic individuals with one copy of *SMN1*. Two variants that are part of a haplotype associated with *SMN1* duplication in silent carriers (2 copies of *SMN1* on one chromosome with zero copies on the other) will be reported if detected with 2 or more copies of *SMN1* in the context of carrier screening. The presence of these variants, particularly in Ashkenazi Jews and Asians, increases the likelihood that 2 copies of *SMN1* are on the same chromosome but this is not definitive.

**Inheritance:** Autosomal recessive

**Cause:** Pathogenic mutations in the *SMN1* gene.

**Variants Tested:** For copy number: *SMN1* (NM\_000344.3) exon 7 c.840C and exon 8 c.\*239G, and *SMN2* (NM\_017411.3) exon 7 c.840T. For haplotype associated with *SMN1* duplication (silent carriers): *SMN1* c.\*3+80T>G (rs143838139) and c.\*211\_\*212del (rs200800214).

**Clinical sensitivity:** 95-98 percent in individuals affected with SMA. Detection rate for carrier screening is 95 percent in Caucasians, 94 percent in Ashkenazi Jewish, 93 percent in Asians, 71 percent in African Americans, and 91 percent in Hispanics.

**Methodology:** Multiplex probe ligation-dependent amplification (MLPA)

**Analytical sensitivity and specificity:** 99 percent.

**Limitations:** Diagnostic errors can occur due to rare sequence variations. Single base pair substitutions, small deletions/duplications, regulatory region mutations, and deep intronic mutations will not be detected. This test is unable to determine chromosomal phase of *SMN1* or *SMN2* copies. Even if the variants associated with *SMN1* duplication are detected, the test cannot definitively differentiate individuals with one or more copies of *SMN1* on each chromosome from individuals with two or more copies of *SMN1* on one chromosome and zero on the other (silent carriers).

Counseling and informed consent are recommended for genetic testing. Consent forms are available online at [www.aruplab.com](http://www.aruplab.com).

See Compliance Statement C: [www.aruplab.com/CS](http://www.aruplab.com/CS)

**CPT Code(s):** 81401

New York DOH approval pending. Call for status update.

**HOT LINE NOTE:** Refer to the Test Mix Addendum for interface build information.

**New Test**     [2013444](#)     **Spinal Muscular Atrophy (SMA) Copy Number Analysis, Fetal**     **SMA DD FE**  
 Available July 18, 2016

Patient History for Fetal Molecular Testing

Test not New York DOH approved at any laboratory. An approved NPL form must accompany specimen.

Time Sensitive

**Methodology:** Multiplex Ligation-dependent Probe Amplification  
**Performed:** Varies  
**Reported:** 7-10 days

**Specimen Required:** Collect: **Fetal Specimen:** Two T-25 flasks at 80 percent confluency of cultured amniocytes. **If the client is unable to culture amniocytes, this can be arranged by contacting ARUP Client Services at (800) 522-2787.**  
**AND Maternal Cell Contamination Specimen:** Lavender (EDTA), Pink (K<sub>2</sub>EDTA), or Yellow (ACD Solution A or B).  
**Specimen Preparation: Cultured Amniocytes:** Fill flasks with culture media. Transport two T-25 flasks at 80 percent confluency of cultured amniocytes. Backup cultures must be retained at the client's institution until testing is complete.  
**Maternal Cell Contamination Specimen:** Transport 3 mL whole blood. (Min: 1 mL)  
**Storage/Transport Temperature: Amniotic Fluid:** Room temperature.  
**Cultured Amniocytes:** CRITICAL ROOM TEMPERATURE. Must be received within 48 hours of shipment due to viability of cells.  
**Maternal Cell Contamination Specimen:** Room temperature.  
**Remarks: Maternal specimen is recommended for proper test interpretation. Order Maternal Cell Contamination. Patient History Form is available on the ARUP Web site or by contacting ARUP Client Services at (800) 522-2787.**  
**Stability (collection to initiation of testing): Fetal Specimen:** Ambient: 48 hours; Refrigerated: Unacceptable; Frozen: Unacceptable  
**Maternal Cell Contamination Specimen:** Ambient: 72 hours; Refrigerated: 1 week; Frozen: Unacceptable

**Reference Interval:** By report

For quality assurance purposes, ARUP Laboratories will confirm the above result at no charge following delivery. Order Confirmation of Fetal Testing and include a copy of the original fetal report (or the mother's name and date of birth) with the test submission. Please contact an ARUP genetic counselor at (800) 242-2787 extension 2141 prior to specimen submission.

Counseling and informed consent are recommended for genetic testing. Consent forms are available online at [www.aruplab.com](http://www.aruplab.com).
