A1 AG

Specimen Required: Collect: Lavender (K2EDTA) or Pink (K2EDTA)

Storage/Transport Temperature: Do not freeze. Transport 7 mL whole blood. (Min: 0.5 mL)

Stability (collection to initiation of testing): Ambient: Unacceptable; Refrigerated: 1 week; Frozen: Unacceptable

Unacceptable Conditions: Separator tubes.

0010003 ABO Group & Rh Type

Specimen Required: Collect: Lavender (K2EDTA), or Pink (K2EDTA).

<u>Specimen Preparation:</u> **Do not freeze red cells.** Transport 3 mL whole blood. (Min 0.5 mL) <u>Storage/Transport Temperature:</u> Refrigerated. <u>Unacceptable Conditions:</u> Separator tubes. <u>Stability (collection to initiation of testing):</u> Ambient: <u>Unacceptable</u>; Refrigerated: 1 week; Frozen: Unacceptable

0010014 ABO-Rh Prenatal

Performed:Mon-FriReported:1-3 Days

 Specimen Required:
 Collect:
 Lavender (K2EDTA) or Pink (K2EDTA).

 Specimen Preparation:
 Transport 7 mL whole blood. (Min: 3 mL)

 Storage/Transport Temperature:
 Refrigerated.

 Stability (collection to initiation of testing):
 Ambient:
 Unacceptable;

 Refrigerated:
 1
 week;
 Frozen:

HOTLINE NOTE: Remove information found in the Unacceptable Conditions field.

0080137 Amino Acids Quantitative by LC-MS/MS, CSF

Reference Interval: Effective November 18, 2019

Components	Reference Interval	Components	Reference Interval
Alpha-Aminoadipic acid	Less than or equal to 2.0 µmol/L	Histidine	7.0 - 24.0 μmol/L
Alpha-Amino-n-butyric acid	Less than or equal to 8.0 µmol/L	Homocitrulline	Less than or equal to 5.0 µmol/L
Alanine	$16.0 - 46.0 \mu mol/L$	Homocystine	Less than or equal to 2.0 µmol/L
Alloisoleucine	Less than or equal to 2.0 µmol/L	Hydroxylysine	Less than or equal to 5.0 µmol/L
Anserine	Less than or equal to 7.0 µmol/L	Hydroxyproline	Less than or equal to 4.0 µmol/L
Arginine	$8.0 - 31.0 \mu mol/L$	Isoleucine	Less than or equal to 12.0 µmol/L
Argininosuccinic acid	Less than or equal to 2.0 µmol/L	Leucine	5.0 - 22.0 μmol/L
Asparagine	$4.0 - 13.0 \mu mol/L$	Lysine	$10.0 - 36.0 \mu mol/L$
Aspartic acid	Less than or equal to 5.0 µmol/L	Methionine	$2.0 - 7.0 \ \mu mol/L$
Beta-Alanine	Less than or equal to 25.0 µmol/L	Ornithine	Less than or equal to 10.0 µmol/L
Beta-Aminoisobutyric acid	Less than or equal to 5.0 µmol/L	Phenylalanine	6.0 - 20.0 μmol/L
Citrulline	Less than or equal to 5.0 µmol/L	Proline	Less than or equal to 5.0 µmol/L
Cystathionine	Less than or equal to 5.0 µmol/L	Sarcosine	Less than or equal to $5.0 \mu mol/L$
Cystine	Less than or equal to 5.0 µmol/L	Serine	18.0 - <mark>66.0</mark> μmol/L
Ethanolamine	Less than or equal to 40.0 µmol/L	Taurine	Less than or equal to 13.0 µmol/L
Gamma-Amino-n-butyric acid	Less than or equal to 5.0 µmol/L	Threonine	14.0 - 59.0 μmol/L
Glutamic acid	Less than or equal to 5.0 µmol/L	Tryptophan	Less than or equal to $5.0 \mu mol/L$
Glutamine	$330.0 - 630.0 \mu mol/L$	Tyrosine	5.0 - 23.0 μmol/L
Glycine	5.0 - 20.0 μmol/L	Valine	$8.0 - 30.0 \mu mol/L$

2009389 Amino Acids Quantitative by LC-MS/MS, Plasma

AA QNT P

Reference Interval: Effective November 18, 2019

Components	Reference Interval		
α-Aminoadipic acid	Less than or equal to 4 µmol/L		
α-Amino-n-butyric acid	Less than or equal to 40 µmol/L		
Alanine		Reference Interval	
Alalille	Age		
	0-30 days 1 month-11 months	140-480 μmol/L 150-520 μmol/L	
	1 year and older	160-530 µmol/L	
4.11 * 1 *		100-550 µmore	
Alloisoleucine	Less than or equal to 5 µmol/L		
Anserine	Less than or equal to 5 µmol/L		
Arginine	Age	Reference Interval	
	0-30 days	16-140 μmol/L	
	1 month-11 months	35-140 µmol/L	
	1 year and older	35-125 µmol/L	
Argininosuccinic acid	Less than or equal to 2 µmol/L		
Asparagine	20-80 µmol/L		
Aspartic acid	Age	Reference Interval	
	0-30 days	Less than or equal to 45 µmol/L	
	1 month-11 months	Less than or equal to 30 µ mol/L	
	1 year and older	Less than or equal to 15 µmol/L	
β-Alanine	Less than or equal to 25 µmol/L		
β-Aminoisobutyric acid	Age	Reference Interval	
p minoisobutyne aclu	0 day to 11 months	Less than or equal to 15 µmol/L	
	1 year and older	Less than or equal to 10μ mol/L	
Citrulline			
Citruinne	Age	Reference Interval	
	0 day to 11 months	7-40 µmol/L	
	1 year and older	10-45 µmol/L	
Cystathionine	Less than or equal to 5 µmol/L		
Cystine	Age	Reference Interval	
	0-30 days	10-60 μmol/L	
	1 month-11 months	10-50 μmol/L	
	1 year and older	10-65 μmol/L	
Ethanolamine	Age	Reference Interval	
	0-30 days	Less than or equal to 100 µmol/L	
	1 month-11 months	Less than or equal to 25 µmol/L	
	1 year and older	Less than or equal to 15 µmol/L	
γ-Amino-n-butyric acid	Less than or equal to 5 µmol/L		
Glutamic acid	Age	Reference Interval	
	0-30 days	30-240 µmol/L	
	1 month-11 months	30-210 µmol/L	
	1 year and older	15-130 µmol/L	
Glutamine	Age	Reference Interval	
	0-30 days	295-900 µmol/L	
	1 month-11 months	400-850 μmol/L	
	1 year and older	380-680 µmol/L	
Glucine			
Glycine	Age	Reference Interval	
	0-30 days 1 month-11 months	160-470 µmol/L 120-375 µmol/L	
	1 month-11 months 1 year and older	120-375 μmol/L 140-420 μmol/L	
Uistiding		140-420 µ1101/L	
Histidine	50-130 μmol/L		
Homocitrulline	Less than or equal to 5 µmol/L		
Homocystine	Less than or equal to 2 µmol/L		
Hydroxylysine	Less than or equal to 5 µmol/L		
Hydroxyproline	Age	Reference Interval	
	0-30 days	15-90 μmol/L	
	1 month-11 months	10-70 μmol/L	
	1 year and older	5-40 μmol/L	
Isoleucine	Age	Reference Interval	
	0-30 days	20-110 µmol/L	
	e e e aujo		

Leucine	Age	Reference Interval	
	0-11 months	50-180 µmol/L	
	1 year and older	60-180 µmol/L	
Lysine	Age	Reference Interval	
5	0-30 days	70-270 µmol/L	
	1 month-11 months	80-260 µmol/L	
	1 year and older	85-230 µmol/L	
Methionine	Age	Reference Interval	
	0-11 months	15-55 µmol/L	
	1 year and older	15-40 µmol/L	
Ornithine	Age	Reference Interval	
ommunite	0-30 days	30-180 µmol/L	
	1 month-11 months	30-140 µmol/L	
	1 year and older	25-110 µmol/L	
Phenylalanine	Age	Reference Interval	
Thenylananne	0-30 days	30-95 µmol/L	
	1 month-11 months	30-90 μmol/L	
	1 year and older	30-82 µmol/L	
Proline	Age	Reference Interval	
Tionne	0-30 days	110-340 µmol/L	
	1 month-11 months	100-320 μmol/L	
	1 year and older	90-350 µmol/L	
Sarcosine	Less than or equal to 5 µmol/L		
Serine		Reference Interval	
Serine	Age 0-30 days	90-340 µmol/L	
	1 month-11 months	90-275 µmol/L	
	1 vear and older	60-170 μmo/L	
Taurine	,	Reference Interval	
Taurnie	Age	30-250 µmol/L	
	0-30 days 1 month-11 months	30-250 µm0/L 30-170 µm0/L	
	1 year and older	30-130 µmol/L	
Threonine			
Threonine	Age	Reference Interval	
	0-30 days 1 month-11 months	60-400 μmol/L 60-310 μmol/L	
	1 year and older	60-190 μmo/L	
Tryptophan	Age	Reference Interval	
пурюрнан			
	0-30 days 1 month-11 months	15-75 μmol/L 20-85 μmol/L	
	1 month-11 months 1 year and older	20-85 μmol/L 25-80 μmol/L	
Tyrosine	Age	Reference Interval	
1 yroshie	0		
	0-30 days 1 month-11 months	30-140 μmol/L 30-130 μmol/L	
	1 month-11 months 1 year and older	30-130 μmo/L 35-110 μmo/L	
Valine		Reference Interval	
v allite	Age		
	0-30 days	80-270 µmol/L	
	1 month-11 months 1 year and older	90-310 μmol/L 120-320 μmol/L	
	1 year and older	120-520 µ11101/L

0080407 Catecholamines Fractionated by LC-MS/MS, Urine Free

CATE UF

Specimen Required: Patient Prep: Drugs and medications may affect results and should be discontinued for at least 72 hours prior to specimen collection, if possible.

Collect: 24-hour or random urine. Refrigerate 24-hour specimen during collection.

Specimen Preparation: Thoroughly mix entire collection (24-hour or Random) in one container. Transfer a 4 mL aliquot to an ARUP Standard Transport Tube. (Min: 2.5 mL) Catecholamines are not stable above pH 7. The pH of such specimens must be adjusted by the addition of 6M HCl acid or sulfamic acid prior to transport. A pH less than 2 can cause assay interference. Specimen preservation can be extended to 1 month refrigerated by performing one of the following:

Option 1: Transfer a 4 mL aliquot to an ARUP Standard Transport Tube and adjust pH to 2.0-4.0 with 6M HCl. (Min: 2.5 mL) Option 2: Transfer a 4 mL aliquot to an ARUP Standard Transport Tube containing 20 mg sulfamic acid (ARUP Supply #48098), available online through eSupply using ARUP Connect[™] or contact ARUP Client Services at (800) 522-2787. (Min: 2.5 mL) <u>Storage/Transport Temperature:</u> Refrigerated.

<u>Remarks:</u> Record total volume and collection time interval on transport tube and test request form.

<u>Unacceptable Conditions:</u> Specimens preserved with boric acid or acetic acid. Specimens with pH greater than 7.

<u>Stability (collection to initiation of testing):</u> Unpreserved: Ambient: Unacceptable; Refrigerated: 1 week; Frozen: Undefined <u>Preserved:</u> Ambient: Unacceptable; Refrigerated: 1 month; Frozen: 6 months

CLOBA SP

New Test Available Now Click for Pricing	<u>3001982</u>	Coccidioides Antibody Ref	lexive Panel	COCCI R
Methodology: Performed: Reported:	Semi-Quantitative Sun-Sat 1-3 days	Enzyme-Linked Immunosorbent Assa	y, Semi-Quantitative Comp	plement Fixation, Qualitative Immunodiffusion
Specimen Required	Specimen Prepara Transport Tube. (I receipt of the acut	tion: Separate from cells ASAP or with Min: 0.15 mL) Parallel testing is prefer		ansfer 2 mL serum to an ARUP Standard nens must be received within 30 days from

Remarks: Please mark specimens plainly as "acute" or "convalescent."

Unacceptable Conditions: Contaminated, hemolyzed, or severely lipemic specimens.

Stability (collection to initiation of testing): Ambient: 48 hours; Refrigerated: 2 weeks; Frozen: 1 year (avoid repeated freeze/thaw cycles)

Reference Interval:

Test Number	Components	Reference Interval	
0050179	Coccidioides Antibody, IgG by ELISA		
		0.9 IV or less	Negative - No significant level of Coccidioides IgG antibody detected.
		1.0-1.4 IV	Equivocal - Questionable presence of Coccidioides IgG antibody detected. Repeat testing in 10-14 days may be helpful.
		1.5 IV or greater	Positive - Presence of IgG antibody to <i>Coccidioides</i> detected, suggestive of current or past infection.
0050178	Coccidioides Antibody, IgM by ELISA		
		0.9 IV or less	Negative - No significant level of Coccidioides IgM antibody detected.
		1.0-1.4 IV	Equivocal - Questionable presence of <i>Coccidioides</i> IgM antibody detected. Repeat testing in 10-14 days may be helpful.
		1.5 IV or greater	Positive - Presence of IgM antibody to <i>Coccidioides</i> detected, suggestive of current or recent infection.
0050183	Coccidioides immitis Antibodies by Immunodiffusion	None Detected	
	Coccidioide Titer	Less than 1:2	

Interpretive Data:

Refer to report.

Note: Negative fungal serology does not rule out the possibility of current infection. *Coccidioides* Antibody IgG and IgM by ELISA are used to screen for *Coccidioides* antibodies. If the ELISA testing is equivocal or positive for IgG and/or IgM, then Coccidioides immitis Angibodies by Immunodiffusion, and Coccidioide Titer will be added. Additional charges apply.

New Test 3001986 Contactin-Associated Protein-2 Antibody, IgG with Reflex to CASPR2GCSF Click for Pricing Titer, CSF Click for Pricing Contactin-Associated Protein-2 Antibody, IgG with Reflex to CASPR2GCSF

Additional Technical Information

Methodology:	Semi-Quantitative Indirect Fluorescent Antibody
Performed:	Wed
Reported:	1-8 days

Specimen Required: Collect: CSF.

<u>Specimen Preparation:</u> Transfer 0.5 mL CSF to an ARUP Standard Transport Tube. (Min: 0.15 mL)
 <u>Storage/Transport Temperature:</u> Refrigerated.
 <u>Unacceptable Conditions:</u> Contaminated, hemolyzed, or severely lipemic specimens.
 <u>Stability (collection to initiation of testing)</u>: Ambient: 48 hours; Refrigerated: 2 weeks; Frozen: 1 month

Reference Interval: Less than 1:1

Interpretive Data: Contactin-associated protein-2 (CASPR2) IgG antibody may occur as part of the voltage-gated potassium channel (VGKC) complex antibodies.

The presence of CASPR2 IgG antibody is associated with a wide spectrum of clinical manifestations, including acquired neuromyotonia, limbic encephalitis, painful neuropathy, and Morvan syndrome. Tumors such as thymoma, small cell lung cancer, and other rarer tumors may occur. The full-spectrum of clinical disorders and tumors associated with the CASPR2 IgG antibody continues to be defined. Results should be interpreted in correlation with the patient's clinical history and other laboratory findings.

This indirect fluorescent antibody assay utilizes contactin-associated protein-2 (CASPR2) transfected cell lines for the detection and semi-quantification of the CASPR2 IgG antibody.

See Compliance Statement D: www.aruplab.com/CS

Note: If CASPR2 antibody IgG is positive, then CASPR2 antibody IgG titer will be added. Additional charges apply.

CPT Code(s): 86255; if reflexed, add 86256

2006340	Exome Sequencing, Familial Control		TRACKEXADD
	Family Member Control History for Exome Sequencing	N 四日 四日 日 二 八	Informed Consent for Exome Sequencing
Methodology: Performed: Reported:	Massively Parallel Sequencing Varies 4-8 weeks		
Specimen Required: Collect: Lavender (K2EDTA) or Yellow (ACD Solution A or B). Peripheral blood required. Contact ARUP's genetic counselor at (800) 242-2787 ext. 2141 if there are questions prior to test submission. Specimen Preparation: Transport 3 mL whole blood. (Min: 1 mL) Storage/Transport Temperature: Refrigerated. Remarks: A completed exome consent form and patient history form is required on each parent or family member submitting a control sample. Stability (collection to initiation of testing): Ambient: 72 hours; Refrigerated: 1 week; Frozen: Unacceptable			
Reference Inte	rval: By report		

Note: Up to four family members may serve as exome sequencing controls for a proband having Exome Sequencing, Trio (2006332). Family members samples are used to aid in interpretation of the proband's exome sequencing data. Secondary findings, including pathogenic variants in genes recommended for analysis by the American College of Medical Genetics (ACMG) and other actionable secondary variants will only be reported for control individuals who complete a separate Exome Sequencing consent form. ACMG genes are only analyzed to the extent that routine exome analysis allows and single disease-causing variants in autosomal recessive ACMG genes are not reported.

CPT Code(s): N/A

2006332 **Exome Sequencing, Trio**

Pre-Authorization for Exome Sequencing -(Not Required)

Informed Consent for Exome Sequencing (Required)

Patient History for Exome Sequencing (Required)

Additional Technical Information

Note: For each parental or family member's specimen, please indicate on the test requisition form that the sample is a control and reference the patient's name. Control samples submitted without a separate signed exome sequencing consent form will not receive a clinical report of their ACMG secondary findings or other actionable secondary variants.

Methodology:	Polymerase Chair	n Reaction/Sequencing			
Performed:	Varies				
Reported:	Within 2 weeks				
Specimen Require	Specimen Prepara Storage/Transpor	r (K ₂ EDTA), Pink (K ₂ EDTA), o ation: Transport 3 mL whole blo t <u>Temperature:</u> Refrigerated. on to initiation of testing): Amb	ood. (Min: 1 mL)	lution A or B). gerated: 1 month; Frozen: 6 months	
Reference Interv	val: By report				

Interpretive Data: Background information for Gamma Globin (HBG1 and HBG2) Sequencing:

Characteristics: Variants in the gamma globin genes, HBG1 and HBG2, may occasionally result in either a quantitative defect (gamma thalassemia or nondeletional hereditary persistence of fetal hemoglobin) or a qualitative abnormality (gamma variant). Gamma variants resulting in unstable, high- and lowoxygen affinity or M hemoglobin variants may result in hemolytic anemia/hyperbilirubinemia, erythrocytosis/cyanosis, or methemoglobinemia in neonates, respectively. Clinical symptoms related to gamma globin variants commonly resolve after the first six months of life given the switch from fetal hemoglobin expression to adult hemoglobin expression.

Incidence: Unknown.

Inheritance: Autosomal dominant.

Cause: Pathogenic germline variants in HBG1 or HBG2.

Clinical Sensitivity: Unknown. Gamma globin variants are a rare cause of neonatal hemolytic anemia, cyanosis, erythrocytosis, or methemoglobinemia. Methodology: Long range PCR followed by nested PCR and bidirectional sequencing of all coding regions, intron/exon boundaries, proximal promoters, and 5' and 3' untranslated regions of the HBG1 and HBG2 genes.

Analytical Sensitivity and Specificity: 99 percent.

Limitations: Diagnostic errors can occur due to rare sequence variations or repeat element insertions. Large deletions/duplications, distal regulatory region variants, deep intronic variants, and hybrid gene events will not be detected.

0092522	Histoplasma Antigen Quantitative by EIA, Serum	HISTOAG S

Effective November 18, 2019 Not Detected

Interpretive Data: The quantitative range of this assay is 0.19-60.0 ng/mL. Antigen concentrations less than 0.19 ng/mL or greater than 60.0 ng/mL fall outside the linear range of the assay and cannot be accurately quantified.

This EIA test should be used in conjunction with other diagnostic procedures, including microbiological culture, histological examination of biopsy samples, serology and/or radiographic evidence, to aid in the diagnosis of histoplasmosis.

Cross-reactivity with *Blastomyces dermatiditis*, *Coccidioides immitis*, and possibly *Talaromyces marneffei* have been observed with this EIA. Other clinically and geographically relevant endemic mycoses should be considered in the case of a positive test result.

New Test	<u>3002009</u> Human Papillomavirus (HPV) Low Risk by in situ Hybridization, Paraffin	HPVLR IS
Click for Pricing		
Methodology:	In situ Hybridization	
Performed:	Mon-Thu	
Reported:	2-5 days	
Specimen Required	: <u>Collect:</u> Tissue. <u>Specimen Preparation</u> : Formalin fix (10 percent neutral buffered formalin) and paraffin embed tissue. Transport tissue to unstained positively charged, 5-micron slides in a tissue transport kit (recommended but not required) (ARUP supply #4 available online through eSupply using ARUP Connect [™] or contact ARUP Client Services at (800) 522-2787. (Min: 4 paraffin block and/or slides from excessive heat. <u>Storage/Transport Temperature</u> : Room temperature. Also acceptable: Refrigerated. Ship in cooled container during sum <u>Remarks</u> : Include surgical pathology report. <u>Unacceptable Conditions</u> : Specimens fixed or processed in alternative fixatives (alcohol, Prefer) or heavy metal fixative Frozen specimens. Stability (collection to initiation of testing): Ambient: Indefinitely; Refrigerated: Indefinitely; Frozen: Unacceptable	47808) slides) Protect mer months.
	Stability (concentration of resting). Antocale indemnicity, Reingerated. Indemnicity, 1102en. Onacceptable

	keterence Interv	val: By report.		

Background information: Kell K/k (KEL) Antigen Genotyping:

Characteristics: Erythrocyte alloimmunization may result in hemolytic transfusion reactions or hemolytic disease of the fetus and newborn (HDFN). **K Antigen Frequency**: 9 percent of Caucasians, 2 percent of African Americans, rare in Asians.

Inheritance: Co-dominant.

Cause: Antigen-antibody mediated red-cell hemolysis between donor/recipient or transferred maternal antibodies.

Polymorphism Tested: Kell blood group KEL*01 (K), KEL*02 (k): c.578C>T, p.Thr193Met. The presence of KEL*01 allele predicts a K positive phenotype.

Clinical Sensitivity: 99 percent.

Methodology: Immucor PreciseTypeTM HEA Molecular BeadChip which is FDA-approved for clinical testing.

Analytic Sensitivity and Specificity: 99 percent.

Limitations: Bloody amniotic fluid samples may give false-negative results because of maternal cell contamination. Rare nucleotide changes leading to altered or partial antigen expression and null phenotypes are not detected by this assay. Patients who have had hematopoietic stem cell transplants may have inconclusive results on this test. Abnormal signal intensities may result in indeterminate genotyping results.

For quality assurance purposes, ARUP Laboratories will confirm the above result at no charge following delivery. Order Confirmation of Fetal Testing and include a copy of the original fetal report (or the mother's name and date of birth) with the test submission. Please contact an ARUP genetic counselor at (800) 242-2787 extension 2141 prior to specimen submission.

Note: Maternal specimen is recommended for proper test interpretation if contamination of the fetal specimen from the mother is suspected. Order Maternal Cell Contamination.

Specimen Required: Collect: CSF

<u>Specimen Preparation:</u> Transfer 0.5 mL CSF to an ARUP Standard Transport Tube. (Min: 0.15 mL)
 <u>Storage/Transport Temperature:</u> Refrigerated.
 <u>Unacceptable Conditions:</u> Contaminated, hemolyzed, or severely lipemic specimens.
 <u>Stability (collection to initiation of testing)</u>: Ambient: 48 hours; Refrigerated: 2 weeks; Frozen: 1 month

Reference Interval: Less than 1:1

Interpretive Data: Leucine-rich, glioma-inactivated 1 protein (LGI1) IgG antibody may occur as part of the voltage-gated potassium channel (VGKC) complex antibodies.

The presence of LGI1 IgG antibody is mainly associated with limbic encephalitis, hyponatremia, and myoclonic movements. LGI1 IgG antibody is rarely associated with tumors but may occur infrequently in Morvan syndrome, neuromyotonia, and idiopathic epilepsy. The full-spectrum of clinical disorders associated with the LGI1 IgG antibody continues to be defined. Results should be interpreted in correlation with the patient's clinical history and other laboratory findings.

This indirect fluorescent antibody assay utilizes leucine-rich, glioma-inactivated 1 protein (LGI1) transfected cell lines for the detection and semiquantification of the LGI1 IgG antibody.

See Compliance Statement D: www.aruplab.com/CS

Note: If LGI1 antibody IgG is positive, then LGI1 antibody IgG titer will be added. Additional charges apply.

CPT Code(s): 86255; if reflexed, add 86256

New York DOH approval pending. Call for status update.

2007996 Metanephrines Fractionated by HPLC-MS/MS, Urine

META URINE

Specimen Required: Patient Prep: If possible, abstain from medications for 72 hours prior to collection.

Collect: 24-hour or random urine. Refrigerate 24-hour specimen during collection.

Specimen Preparation: Thoroughly mix entire collection (24-hour or Random) in one container. Transfer a 4 mL aliquot to an ARUP Standard Transport Tube. (Min: 2.5 mL) A pH lower than 2 can cause assay interference. Record total volume and collection time interval on transport tube and test request form.

Specimen preservation can be extended to 1 month refrigerated by performing one of the following:

Option 1: Transfer a 4 mL aliquot to an ARUP Standard Transport Tube. (Min: 2.5 mL) Adjust pH to 2.0-4.0 with 6M HCl. Option 2: Transfer a 4 mL aliquot to an ARUP Standard Transport Tube containing 20 mg sulfamic acid (ARUP Supply #48098), available online through eSupply using ARUP Connect[™]or contact ARUP Client Services at (800) 522-2787. (Min: 2.5 mL) <u>Storage/Transport Temperature:</u> Refrigerated. Also acceptable: Frozen.

<u>Unacceptable Conditions:</u> Specimens preserved with boric acid or acetic acid.

Stability (collection to initiation of testing): Ambient: Unacceptable; Refrigerated: 2 weeks (unpreserved), 1 month (preserved); Frozen: 1 month

Unacceptable Conditions: Plasma or serum. Specimens collected in sodium heparin tubes. Stability (collection to initiation of testing): Fetal Specimen: Ambient: 48 hours; Refrigerated: Unacceptable; Frozen: Unacceptable Whole Blood or Maternal Cell Contamination Specimen: Ambient: 72 hours; Refrigerated: 1 week; Frozen: 1 month Reference Interval: By report **Interpretive Data:** Background Information for RhC/c (RHCE) Antigen Genotyping

Characteristics: Erythrocyte alloimmunization may result in hemolytic transfusion reactions or hemolytic disease of the fetus and newborn (HDFN).

C Antigen Frequency: 0.68 Caucasians, 0.27 African Americans, 0.93 Asians.

c Antigen Frequency: 0.80 Caucasians, 0.98 African Americans, 0.47 Asians.

Inheritance: Co-dominant.

Cause: Antigen-antibody mediated red-cell hemolysis between donor/recipient or transferred maternal antibodies.

Polymorphisms Tested: Rh blood group RHCE*2 (C), RHCE*4 (c): c.307C>T; p.Pro103Ser and 109bp insertion.

Clinical Sensitivity: 99 percent.

Methodology: Immucor PreciseType[™] HEA Molecular BeadChip which is FDA-approved for clinical testing.

Analytic Sensitivity and Specificity: 99 percent.

Limitations: Bloody amniotic fluid samples may give false-negative results because of maternal cell contamination. Rare nucleotide changes leading to altered or partial antigen expression may not be detected by this assay. Genotypes resulting in Rh null phenotypes will not be assessed. This assay is occasionally limited in predicting genotype due to extreme variation in the Rh locus. False-negative RhC or Rhc predictions may result due to *RHCE-D-CE* fusion genes. Patients who have had hematopoietic stem cell transplants may have inconclusive results on this test. Abnormal signal intensities may result in indeterminate genotyping results.

For quality assurance purposes, ARUP Laboratories will confirm the above result at no charge following delivery. Order Confirmation of Fetal Testing and include a copy of the original fetal report (or the mother's name and date of birth) with the test submission. Please contact an ARUP genetic counselor at (800) 242-2787 extension 2141 prior to specimen submission.

Note: Maternal specimen is recommended for proper test interpretation if contamination of the fetal specimen from the mother is suspected. Order Maternal Cell Contamination.

This assay is occasionally limited in predicting genotype due to extreme variation in the Rh locus. False-negative Rhe predictions may result due to *RHCE-D-CE* fusion genes. Patients who have had hematopoietic stem cell transplants may have inconclusive results on this test. Abnormal signal intensities may result in indeterminate genotyping results.

For quality assurance purposes, ARUP Laboratories will confirm the above result at no charge following delivery. Order Confirmation of Fetal Testing and include a copy of the original fetal report (or the mother's name and date of birth) with the test submission. Please contact an ARUP genetic counselor at (800) 242-2787 extension 2141 prior to specimen submission.

Note: Maternal specimen is recommended for proper test interpretation if contamination of the fetal specimen from the mother is suspected. Order Maternal Cell Contamination.

0090369 THC Metabolite, Urine, Quantitative

Specimen Required: Collect: Random urine.

<u>Specimen Preparation:</u> Transfer 1 mL urine with no additives or preservatives to an ARUP Standard Transport Tube. (Min: 0.5 mL) <u>Storage/Transport Temperature:</u> Room temperature. <u>Unacceptable Conditions:</u> Specimens exposed to repeated freeze/thaw cycles. <u>Stability (collection to initiation of testing):</u> Ambient: 1 week; Refrigerated: 1 month; Frozen: 1 Month

Reference Interval:

Litectiv		
Drug	as Covered	Cutoff Concentrations
11-N	or-9-carboxy-THC	15 ng/mL

Interpretive Data:

Methodology: Liquid Chromatography-Tandem Mass Spectrometry

Positive cutoff: 15 ng/mL

For medical purposes only; not valid for forensic use.

The drug analyte detected in this assay, 9-carboxy THC, is a metabolite of delta-9-tetrahydrocannabinol (THC). Detection of 9-carboxy THC suggests use of, or exposure to, a product containing THC. This test cannot distinguish between prescribed or non-prescribed forms of THC, nor can it distinguish between active or passive use. The 9-carboxy THC metabolite can be detected in urine for several weeks. Normalization of results to creatinine concentration can help document elimination or suggest recent use, when specimens are collected at least one week apart. See Compliance Statement B: www.aruplab.com/CS

0013410 Thermal Amplitude Test

IRL-THERM

Specimen Required: Collect: Lavender (K₂ EDTA), Pink (K₂ EDTA), or Plain Red.

<u>Specimen Preparation:</u> Maintain at 37°C until separated from cells. Transport 7 mL red blood cells and 5 mL plasma or serum in an ARUP Standard Transport Tube. (Min: 7 mL red blood cells and 3 mL plasma or serum) <u>Storage/Transport Temperature:</u> Refrigerated. <u>Unacceptable Conditions:</u> Separator or Gel Tubes. <u>Stability (collection to initiation of testing):</u> Ambient: Unacceptable; Refrigerated: 1 week; Frozen: Unacceptable

Interpretive Data:

Background Information for UGT1A1 Sequencing:

Characteristics: *UGT1A1* encodes the bilirubin uridine diphosphate glucuronosyl transferase 1A1 enzyme, which is responsible for the clearance of drugs (eg, irinotecan) and endogenous compounds (eg, bilirubin). UGT1A1 deficiency is associated with inherited nonhemolytic unconjugated hyperbilirubinemia and a spectrum of phenotypes dependent on the level of residual enzyme activity. Crigler-Najjar syndrome type I, results from absent enzyme activity and severe unconjugated hyperbilirubinemia causing jaundice and risk for kernicterus. Crigler-Najjar syndrome type II, is associated with reduced hepatic enzyme activity, intermediate levels of hyperbilirubinemia, and low risk for kernicterus. Gilbert syndrome is clinically benign and associated with mild, fluctuating hyperbilirubinemia, which can be caused by impaired bilirubin glucuronidation. Pathogenic *UGT1A1* variants are also associated with an increased risk for irinotecan toxicity (neutropenia and diarrhea) and bilirubin-related discontinuation of atazanavir.

Cause: Two pathogenic *UGT1A1* variants on opposite chromosomes. A variable number of TA repeats in the (TA)nTAA element of the *UGT1A1* promoter affects transcription efficiency. The common number of repeats is six (TA)6, **1* allele, while seven repeats (TA)7, *28 allele is associated with reduced transcription activity.

Epidemiology: Incidence of Crigler-Najjar syndrome is estimated at 1 in 1 million newborns worldwide. Approximately 3-7 percent of individuals in the U.S. have Gilbert syndrome.

Inheritance: Autosomal recessive for Crigler-Najjar and Gilbert syndromes.

Clinical Sensitivity/Specificity: Unknown for Crigler-Najjar and Gilbert syndromes. Estimated risk of irinotecan toxicity by genotype in Caucasian patients with colorectal cancer (PMID: 23529007).

(TA)6/6 (*1/*1): diarrhea 15 percent; neutropenia 11 percent.

(TA)6/7 (*1/*28): diarrhea OR=1.20; neutropenia OR=1.90.

(TA)7/7 (*28/*28): diarrhea OR=1.84; neutropenia OR=4.79.

Risks for bilirubin-related atazanavir discontinuation by predicted UGT1A1 phenotype (PMID: 26417955):

Poor metabolizer (*28/*28, *28/*37, *37/*37): 20-60 percent.

Intermediate metabolizer (*1/*28, *1/*37, *36/*28, *36/*37): less than 5 percent.

Extensive or normal metabolizer (*1/*1, *1/*36, *36/*36): less than 5 percent.

Methodology: Bidirectional sequencing of the UGT1A1 coding regions, intron/exon boundaries, and polymorphic (TA)nTAA repeat within the promoter region.

Analytical Sensitivity: Greater than 99 percent.

Limitations: Diagnostic errors can occur due to rare sequence variations. *UGT1A1* regulatory region variants other than the (TA)nTAA promoter variant will not be analyzed. Deep intronic variants, large deletions/duplications/insertions, and gene conversion events will not be detected. Variants of uncertain clinical significance within the *UGT1A1* coding region will not be reported for pharmacogenetic indications. Genetic and non-genetic factors other than *UGT1A1*, may contribute to irinotecan toxicity and efficacy.

2009463 Voltage-Gated Potassium Channel (VGKC) Antibody with Reflex to LGI1 and CASPR2 Screen and Titer, Serum

VGKC R

Reference Interval:

Test Number	Components	Reference Interval	
2004890	Voltage-Gated Potassium Channel (VGKC) Antibody, Serum	Negative	31 pmol/L or less
		Indeterminate	32-87 pmol/L
		Positive	88 pmol/L or greater
2009456	Leucine-Rich, Glioma-Inactivated Protein 1 Antibody, IgG with Reflex to Titer, Serum	Less than 1:10	
2009452	Contactin-Associated Protein-2 Antibody, IgG with Reflex to Titer, Serum	Less than 1:10	

Interpretive Data: Voltage-Gated Potassium Channel (VGKC) antibodies are associated with neuromuscular weakness as found in neuromyotonia (also known as Issacs syndrome) and Morvan syndrome. VGKC antibodies are also associated with paraneoplastic neurological syndromes and limbic encephalitis; however, VGKC antibody-associated limbic encephalitis may be associated with antibodies to leucine-rich, glioma-inactivated 1 protein (LGIgi1) or contactin-associated protein-2 (CASPRaspr-2) instead of potassium channel antigens. A substantial number of VGKC-antibody positive cases are negative for LGI1 and CASPR-2 IgG autoantibodies, not all VGKC complex antigens are known. The clinical significance of this test can only be determined in conjunction with the patient's clinical history and related laboratory testing.

See Compliance Statement D: www.aruplab.com/CS

HOTLINE NOTE: There is a clinically significant charting name change associated with this test.

Change the charting name for reflexed component 2009453, CASPR2 Ab IgG Screen by IFA to CASPR2 Ab IgG Screen by IFA, Serum. Change the charting name for reflexed component 2009455 from CASPR2 Ab IgG Titer by IFA to CASPR2 Ab IgG Titer by IFA, Serum. Change the charting name for reflexed component 2009457, LGI1 Ab IgG Screen by IFA to LGI1 Ab IgG Screen by IFA, Serum. Change the charting name for reflexed component 2009459, LGI1 Ab IgG Titer by IFA to LGI1 Ab IgG Titer by IFA, Serum.
