10-Dec-19 09:52:00 Varicella-Zoster Virus Ab, IgG:
 INTERPRETIVE INFORMATION: VZV Ab, IgG

- 134.9 IV or less Negative - No significant level of detectable IgG varicella-zoster antibody.
- 135.0 - 164.9 IV Equivocal - Repeat testing in 10-14 days may be helpful.
- 165.0 IV or greater Positive - IgG antibody to varicella-zoster detected, which may indicate a current or past varicella-zoster infection.

The best evidence for current infection is a significant change on two appropriately timed specimens, where both tests are done in the same laboratory at the same time.

10-Dec-19 09:52:00 Varicella-Zoster Virus Antibody, IgM:
 INTERPRETIVE INFORMATION: Varicella-Zoster Virus Antibody, IgM

- 0.90 ISR or less Negative - No significant level of detectable varicella-zoster virus IgM antibody.
- 0.91-1.09 ISR Equivocal - Repeat testing in 10-14 days may be helpful.
- 1.10 ISR or greater Positive - Significant level of detectable varicella-zoster virus IgM antibody. Indicative of current or recent infection. However, low levels of IgM antibodies may occasionally persist for more than 12 months post-infection or immunization.
