Tracy I. George, MD, Chief Medical Officer

Patient Age/Sex: 31 years Female

Specimen Collected: 03-Dec-21 08:54

Procedure	Result	Units	Reference Interval
Carcinoembryonic Antigen	3.9 ^H ⁱ¹	ng/mL	<=3.8

Test Information

i1: Carcinoembryonic Antigen

INTERPRETIVE INFORMATION: Carcinoembryonic Antigen

The Roche CEA electrochemiluminescent immunoassay was used. Results obtained with different test methods or kits cannot be used interchangeably. Measurement of CEA has been shown to be clinically relevant in the management of patients with colorectal, breast, lung, prostatic, pancreatic, and ovarian carcinomas. Smokers may have slightly elevated levels of CEA. The CEA assay value, regardless of level, should not be interpreted as evidence for the presence or absence of malignant disease and is not recommended for use as a screening procedure to detect the presence of cancer in the general population.
