15-Mar-18 14:48:00 ADAMTS13 Activity:
 INTERPRETIVE INFORMATION: ADAMTS13 Activity

ADAMTS13 levels of less than 10 percent may be associated with either inherited (Upshaw-Schulman Syndrome) or acquired thrombotic thrombocytopenic purpura (TTP).

A variety of medical conditions may result in a mild to moderate deficiency of ADAMTS13 activity. Recent plasma exchange therapy may raise the observed ADAMTS13 activity.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement D: aruplab.com/CS
