Ova and Parasite, Wet Mount	Negative		[Negative]	18-066-900186	07-Mar-18 09:37:00	13-Mar-18 09:37:00	13-Mar-18 09:39:25
Ova and Parasite, Trichrome Stain	Negative		[Negative]	18-066-900186	07-Mar-18 09:37:00	13-Mar-18 09:37:00	13-Mar-18 09:39:25

07-Mar-18 09:37:00 Ova and Parasite, Trichrome Stain:
 TEST INFORMATION: Ova and Parasite Exam, Fecal
 (Immunocompromised or Travel History)

Method for identification of Ova and Parasites includes wet mount and trichromes stain.

Due to the various shedding cycles of many parasites, three separate stool specimens collected over a 5-7-day period are recommended for ova and parasite examination. A single negative result does not rule out the possibility of a parasitic infection. Stool antigen testing is the optimal test method for determining the parasitic presence of Giardia, Cryptosporidium spp, or Entamoeba histolytica. The ova and parasite exam does not specifically detect Cryptosporidium, Cyclospora, Cystoisospora, and Microsporidia. For Cryptosporidium, refer to Cryptosporidium Antigen by EIA (ARUP test code 0060045). For Cyclospora and Cystoisospora, refer to Parasitology Stain by Modified Acid-Fast (ARUP test code 0060046). For Microsporidia, refer to Microsporidia Stain (ARUP test code 0060050).
