Tracy I. George, MD, Chief Medical Officer

Patient Age/Sex: 14 hours Male

**Specimen Collected: 14-Mar-22 14:41**

Procedure	Result	Units	Report/Verified: 14-Mar-22 14:47	Reference Interval
Coccidioides Ab by CF & ID, CSF			Received: 14-Mar-22 14:43	
Coccidioides Ab by CF, CSF	1:4 * i1			<1:2
Coccidioides by Immunodiffusion, CSF	Detected * t1 i2			Not Detected

**Interpretive Text**

t1: 14-Mar-22 14:41 (Coccidioides by Immunodiffusion, CSF)  
IDTP and IDCF bands were detected, suggesting current or recent Coccidioides infection.

**Test Information**

i1: Coccidioides Ab by CF, CSF  
INTERPRETIVE INFORMATION: Coccidioides Ab by Complement Fixation (CF)

Any titer suggests past or current infection. However, greater than 30 percent of cases with chronic residual pulmonary disease have negative Complement Fixation (CF) tests. Titers of less than 1:32 (even as low as 1:2) may indicate past infection or self-limited disease; anticoccidial CF antibody titers in excess of 1:16 may indicate disseminated infection. CF serology may be used to follow therapy. Antibody in CSF is considered diagnostic for coccidioidal meningitis, although 10 percent of patients with coccidioidal meningitis will not have antibody in CSF.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

i2: Coccidioides by Immunodiffusion, CSF  
INTERPRETIVE INFORMATION: Coccidioides by Immunodiffusion, CSF

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
