Jonathan R. Genzen, MD, PhD, Chief Medical Officer

Patient Age/Sex: 33 years Female

**Specimen Collected: 13-Mar-23 14:25**

Marijuana, MEC, Qual Procedure	Received: 13-Mar-23 14:25 Result	Report/Verified: 13-Mar-23 14:26 Units	Reference Interval
Marjiuana, Meconium, Qual	Positive <sup>i1</sup>		

**Test Information**

i1: Marjiuana, Meconium, Qual

INTERPRETIVE INFORMATION: Marijuana,  
Meconium, Qual

1. Drugs covered: 9-carboxy-THC.
2. Positive cutoff: 5 ng/g.
3. For medical purposes only; not valid for forensic use.
4. Meconium begins to form between the 12th and 16th week of gestation. Meconium drug testing can detect maternal drug use during the last 4 to 5 months of pregnancy. A negative result does not exclude the possibility that a mother used drugs during pregnancy. Detection of drug use depends on the quantity and quality of the specimen tested as well as the pattern and frequency of drug(s) used by mother. The concentration value must be greater than or equal to the cutoff to be reported as positive. Interpretive questions should be directed to the laboratory.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
