12-Sep-18 07:19:00 HIV-1 Qnt by NAAT Interp, CSF:

INTERPRETIVE INFORMATION: HIV-1 by Quantitative NAAT, CSF

Normal range for this assay is "Not Detected".

The quantitative range of this assay is 1.47-7.00 log copies/mL (30-10,000,000 copies/mL).

An interpretation of "Not Detected" does not rule out the presence of inhibitors or HIV-1 RNA concentration below the level of detection of the assay. Care should be taken in the interpretation of any single viral load determination.

The clinical significance of changes in HIV-1 RNA concentration has not been fully established; however, a change of 0.5 log copies/mL may be significant.

This assay should not be used for blood donor screening, associated re-entry protocols, or for screening Human Cell, Tissues and Cellular Tissue-Based Products (HCT/P).

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS
