	Units	
	ng/mL	

**Test Information**

il: Trazodone\_Serum/Plasma  
REFERENCE INTERVAL: Trazodone, Serum/Plasma

Therapeutic Range: 800 - 1600 ng/mL

Toxic: Not well established

Trazodone is a selective serotonin reuptake inhibitor antidepressant drug indicated for the treatment of major depressive disorder. The pharmacokinetics of trazodone is influenced by drug-drug interactions that induce or inhibit CYP3A4 metabolism. Adverse effects may include sedation, fatigue, headache, blurred vision, nausea and cardiac arrhythmia. The risk of serotonin syndrome is increased with concomitant use of other serotonergic drugs. Concomitant use of trazodone with anticoagulants and nonsteroidal anti-inflammatory drugs may increase the risk of bleeding.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
