

Client: ARUP Example Report Only 500 Chipeta Way Salt Lake City, UT 84108- USA	Patient: DOB: Sex: Male Patient Identifiers: 69990 Visit Number (FIN): 70410 Client Supplied ID:	TEST, HENS GR5
Provider: Jones ,Shalane		

Specimen Collected: 7/28/2025 07:59 MDT			
B. henselae Antibody, IgG With Reflex	 Received: 7/28/2025 08:00 MDT	Report/Verified: 7/28/2025 08:21 MDT	
Procedure	Result	Units	Reference Interval
B.henselae IgG Screen	Positive * f1 i1		[Negative]
B. henselae Antibody, IgG Endpoint Titer	 Received: 7/28/2025 08:00 MDT	Report/Verified: 7/28/2025 08:21 MDT	
Procedure	Result	Units	Reference Interval
B.henselae IgG Titer	1:512 * i2		[<1:64]

Result Footnote

f1: B. henselae IgG Screen
Bartonella henselae screen is positive. Titer result to follow.

Test Information

i1: B. henselae IgG Screen
INTERPRETIVE INFORMATION: B. henselae Antibody, IgG with Reflex
Negative: No significant level of Bartonella henselae IgG antibody detected.
Equivocal: Questionable presence of Bartonella henselae IgG antibody detected. Repeat testing in 10-14 days may be helpful.
Positive: Presence of IgG antibody to Bartonella henselae detected, suggestive of current or past infection.

A low positive result suggests past exposure or infection, while a high positive result may indicate recent or current infection, but is inconclusive for diagnosis. Seroconversion between acute and convalescent sera is considered strong evidence of recent infection. The best evidence for infection is significant change on two appropriately timed specimens where both tests are done in the same laboratory at the same time.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the U.S. Food and Drug Administration. This test was performed in a CLIA-certified laboratory and is intended for clinical purposes.
