CUSTOMER-SATISFACTION SURVEYS

for physicians, nursing staff, and outreach clients

SURVEY OBJECTIVES

1. Create a benchmark for current customer-satisfaction levels as a means of comparison for the future.
2. Implement a consistent assessment tool that can be used periodically to monitor customer satisfaction.
3. Receive important feedback from your most valuable resources for improvement opportunities.
4. Create an accountability mechanism for executing the service-excellence principles that will drive a customer-focused organizational culture.
5. Provide a tool to meet CAP requirements.

SURVEY OVERVIEW

Most healthcare systems are actively engaged in surveying patient-satisfaction levels using either external survey organizations or their own internal processes. Most often, however, the unique circumstances surrounding the laboratory's role during a patient's episode of care make it challenging for these survey mechanisms to capture satisfaction scores related to the lab's interactions with its primary customer groups. Additionally, the external business, or outreach component, satisfaction levels go unmonitored and unmeasured.

ARUP has developed survey tools that will capture valuable, specific information related to the role of the hospital laboratory as it interacts with its primary customer groups: nursing, hospital-privileged and staff physicians, and outreach clients. A survey for patient-service centers/drawing stations has not been included since most laboratories already survey their patients in this setting; however, if a client would like this customer group surveyed, an additional survey tool will be added. Three unique surveys, targeted to these customer groups, have been developed to gather information specific to each group's needs. ARUP will administer the surveys and provide analysis prior to commencing the curriculum and again at its culmination.
